classified as added mass and added stiffness fuzzy structures, are identified and shown to result in fundamentally different EIT. The issue of an enhanced dissipation of the vibrations of a large scale main structure by the attachment of small scale detail structures is investigated and related to previous studies. Several outstanding research issues are identified. (39 refs).

**Descriptors**

acoustic-impedance; composite-materials; structural-acoustics;  
vibrations.

**Keywords**

**complexity**; structural acoustics; fuzzy structure; effective impedance theories; structural **acoustic complexity**; small sized structural elements; large sized main structure; statistical physics; statistical smoothing; spatial smoothing; small scale structural elements; stiffness fuzzy structures; enhanced dissipation.

**Classification codes**

A4340 (Structural acoustics and vibration).

A4630M (Vibrations, aeroelasticity, hydroelasticity, mechanical waves, and shocks).
